Summary

- The Netherlands is the first producer of European plaice in the world with nearly 29,000 tonnes and the EU accounts for 86% of the world catches with more than 86,000 tonnes (2014).

- Total Allowable Catches (TACs) for plaice more than doubled between 2008 and 2015. However, TACs were not fully utilized by the EU fleet: 93% utilisation in 2010 and 68% in 2014 and 64% in 2015.

- Italy, the United Kingdom, and Germany are the main consumer markets. They represent 64% of the total EU market for plaice.

- The Netherlands are a major player in terms of production, trade and processing, importing mainly from UK (fresh whole plaice) and exporting to Italy and Germany (fresh and frozen fillets).

- From 2009 Dutch plaice fisheries began to be MSC certified. In 2013 certified plaice accounts for 65% of the national catches.

- Regarding price structure in the supply chain:
  - As the filleting yield is quite low, the filleting loss is a major cost item.
  - In the case of the fresh fillet marketed in the Dutch retail, the packaging cost and the distribution from platform to point of sale account for more than half of the retail price.
  - For the frozen fillet shipped to Italy, the filleting, freezing and packaging costs represent 26% of the price delivered at platform in Italy.
  - The net margin of the processor is higher in the case of fresh fillet (0.23 EUR/kg) than in the case of frozen fillet (0.15 EUR/kg).
0 TASK REMINDER – Scope and content

0.1 Case study scope

Reminder

The rationale for the choice of plaice to analyse price transmission and distribution of value in the Dutch supply chain is described in the table below.

0.2 Content of the document

In conformity with the methodology developed within the EUMOFA, the document includes:

- A description of the product;
- Most relevant EU markets for plaice, with a special focus on the Dutch, Italian and German markets;
- An analysis of the price transmission along the supply chain in the Netherlands.
1 DESCRIPTION OF THE PRODUCT

1.1 Biological and commercial characteristics

The case study focuses on:

- Fresh plaice, filleted;
- Frozen plaice, filleted.

Case study product

Name: European plaice (*Pleuronectes platessa*)
ERS code: PLE
Presentation: Fresh fillets and frozen fillets

Commercial size:
In the Netherlands, there are four categories based on fish size:

- Category 1: length > 41 cm
- Category 2: length between 35 cm and 41 cm
- Category 3: length between 31 cm and 35 cm
- Category 4: length between 27 cm and 31 cm

Biological parameters

Habitat:

- Lives on a sandy or mixed seabed.
- Lives from a few meters to about 100 m deep, most adult plaice occur at depths of 10-50m.
- Eats molluscs and worms.
- Temperature: 2-15°C.

Spawning:

- Spawns when the temperature is about 6° C.
- Peak spawning time from early January in the eastern Channel to mid-February in the German area.

Geographical distribution (see maps on following page):

- The European plaice is present from Mediterranean area to Northern European area.
There is a larger distribution in the North Sea and in the Channel, especially along the Dutch, Belgian and French coasts.

**Figure 1 - Distribution of *Pleuronectes platessa* in European area**

Source: FAO

**Figure 2 - Map of spawning area for *Pleuronectes platessa* in North Sea**

Source: ICES
Substitutes

The main substitute to plaice on the market is the “Pacific plaice”, also called “rock sole” (*Lepidopsetta bilineata*), fished in the Northern Pacific by the US fleet (61,000 t in 2013). Since 2007 rock sole imports benefit, together with other flatfish imports, from an Autonomous Tariff Quota (5,000 t free of custom duties).

Plaice is also in competition on the market with other flatfish such as dab, flounder, sole...

Related codes

European plaice is distinguished in the Combined Nomenclature.

- Fresh plaice “*Pleuronectes platessa*”: CN code 03 02 22 00
- Frozen fillets of plaice “*Pleuronectes platessa*”:
  - CN code 03 04 83 10: since 2012
  - CN code 03 04 29 71: between 2007 and 2011
  - CN code 03 04 20 71: before 2007
- Frozen plaice "*Pleuronectes platessa*": CN code 03 03 32 00
- For fresh fillets, there is no specific code for plaice which is included in a heading grouping all flatfish: “*Pleuronectidae, Bothidae, Cynoglossidae, Soleidae, Scophthalmidae and Citharidae*”: CN code 03 04 43 00. This code is only available since 2012. We consider that this code mainly covers plaice concerned by the Dutch trade.

1.2 Catches and availability of Plaice

Plaice supply exclusively comes from marine fishery. The Netherlands is the first world producer of European plaice (28,779 tonnes in 2014), followed by Denmark and the United Kingdom. The share of Netherlands in the world catch ranges between 28,0% and 32,2% over the period 2003-2014 (32,2% to 37,2% of EU catches). EU accounts for the largest share of European plaice catches: 85,6% in 2014. Main non-EU fishing countries are Russia and Iceland.

We can observe two periods in the evolution of plaice catches since 2003, a decrease between 2003 and 2008 (-24.4% at EU-28 level) and an increase between 2008 and 2014 (+36.7% at EU28 level), in relation with the evolutions of quotas. In this last period, we observe a decrease of the catches at EU level (-8.2%) which concern the main Member States: the Netherlands (-14.7%), Denmark (-4.8%) and the United Kingdom (-9.9%).

Source: FAO
Total Allowable Catches (TACs) for plaice decreased in the EU by 10% between 2005 and 2008 and more than doubled between 2008 and 2015 (143.188 tonnes).

The TACs increased substantially since 2011, some 10% to 15% a year. However, TACs were not fully utilised by the EU fleet (93% in 2010, 82% in 2013 and 68% in 2014). This can be explained by three mains factors:

- the fleet decreased in the last 10 years due to a reduction of fishing opportunities before 2008 (evolution of TACs) and economic difficulties in the early 2010s due to low prices;
- competition with other more attractive fisheries (especially sole);
- the decrease of TACs until 2008 led to substitution on the market with other flatfish imported from third countries. Regaining and extending market shares remain challenging for plaice producers.

According to processors interviewed, there is a growing demand for European plaice on the market. In case of low availability on the market, the substitution product is the Pacific plaice, fished in the northern part of the Pacific Ocean. This species increased its position on the EU market in the 2000s, due to its price positioning vis-a-vis the European plaice and lower TACs quotas for European plaice.

**Figure 4 - Evolution of TACs, catches and quota utilisation between 2005 and 2015 at EU level**

Source: EU – DG MARE
In 2016, the quota for plaice in the Netherlands is 48.917 tonnes, accounting for 31% of EU quota. Most of this quota (47.112 tonnes in 2016) is concentrated in areas IIa, IIIa (exc. Skagerrak and Kattegat) and IV.

2 THE EU MARKETS FOR PLAICE

2.1 Structure of the EU market

2.1.1 Apparent market by Member State

The EU apparent market for plaice is 97.678 tonnes in 2014. The two first markets, Italy and the United Kingdom, account for 51,6% of the EU apparent consumption. Italian supply is mainly based on imports while the one in the United Kingdom is based on catches by the national fleet.

The following main markets are Germany, the Netherlands, France, Denmark, Belgium and Poland.

Extra-EU trade remains limited: 6.578 tonnes imported from third countries in 2014 and 3.417 tonnes exported.

Frozen fillets account for 40,7% of international trade, followed by fresh whole fish (35,3%), fresh fillets (20,2%) and frozen whole fish (3,8%).

¹ According to expert estimate, the present calculation overestimates the apparent market in the Netherlands. This is detailed in section 2.3.1. Supply balance.
2.1.2 Imports

The main importers of European plaice in the EU-28 are the Netherlands, Italy, Germany, Poland and the United Kingdom:

- The Netherlands imported 19.693 tonnes of plaice products in 2015, 99% of the volume imported are fresh whole plaice. Final products are intended for the national market and exports (18.117 tonnes exported in 2015, mainly frozen fillets).
- Italy imported 13.317 tonnes in 2015, 95% of the volumes are fillets (mainly frozen) intended for consumption on the national market (only 67 tonnes exported).
- Germany imported 6.418 tonnes, 61% are fillets, fresh and frozen.
- Poland imported 5.308 tonnes, 88% are fresh whole plaice.
- The United Kingdom imported 4.170 tonnes, the share of fillets is lower than for Italy and Germany with 43% (fresh and frozen).

**Figure 5 - Volume of imports by Member State of the EU-28 in 2015 (tonnes of products)**

The breakdown between the different types of products in the imports of the main Member States is displayed in the figures on the following page.
Figure 6 - Breakdown of imports by types of products (2015)

Source: EUMOFA
2.1.3 Exports

The main exporters of European plaice in the EU-28 are the Netherlands, Denmark, Germany and the United Kingdom:

- The Netherlands exported 18,117 tonnes in 2015, out of which 57% were frozen fillets and 24% fresh fillets.
- The exports from Denmark, Belgium and Germany ranged between 16,619 and 6,611 tonnes, fresh whole plaice accounted for more than 70% of the total volume in each Member State.

**Figure 7 - Volume of exports by Member State of the EU 28 in 2015 (tonnes of products)**

![Volume of exports by Member State of the EU 28 in 2015 (tonnes of products)](source: EUMOFA)
Figure 8 - Breakdown of the exports by types of products (2015)

Source: EUMOFA
2.2 Market segmentation

There are different types of segments on the plaice markets, based on:

- size of fish,
- presentation and preservation,
- certification,
- possible use of additives.

2.2.1 Segmentation by size

There are four size categories at first sale level:

- Category 1: length >41 cm
- Category 2: length between 35 cm and 41 cm
- Category 3: length between 31 cm and 35 cm
- Category 4: length between 27 cm and 31 cm

Most of catches are under categories 4 and 3 (smallest fish), which accounted for 74.5% of the total volume sold in Dutch auctions in 2014.

Figure 9 - Breakdown of volume sold in auction in the Netherlands by size category (2014)

Source: based on data from Dutch Ministry of Economic Affairs (Ministerie van Economische Zaken)
The price per kg increases for larger fishes (twice higher for cat. 1 fish compared to cat. 4 fish in 2015). The markets are different for each category. For instance, according to processors interviewed, most of category 1 fish are channeled to foodservices on the UK market. The category 4 is mainly filleted and sold frozen.

**Figure 10 - Price in auction for Plaice in the Netherlands for the different size categories (2014 and 2015)**

![Graph showing price in auction for Plaice in the Netherlands for different size categories (2014 and 2015).]

Source: based on data from Ministry of Economic Affairs

### 2.2.2 Segmentation by presentation /preservation

The market is segmented according to presentation and preservation

- Fresh / frozen;
- Whole / filleted;
- Skin on/off for filleted products: top skin (black) and/or the bottom skin (white):
  - both skin on (black and white): mainly marketed in the UK,
  - white skin on: this is the most common product, sold on the major markets: the Netherlands, Germany, Italy and France;
  - skinless: marketed in particular in Switzerland.

The presence of skins has a great impact on costs and margins. The following table indicates the yields reached in filleting operations in function of the skins off/on.

**Table 5 - Yield filleting depending of the skin on/off**

<table>
<thead>
<tr>

<tr>
<td>White skin on, black skin off</td>
<td>43%</td>
</tr>
<tr>
<td>Skinless</td>
<td>38%</td>
</tr>
</tbody>
</table>

Source: EUMOFA, interviews with processors
In addition, we shall mention that filleted products may be marketed as “twin fillets”. These are two fillets gathered to compose one larger item. This is mainly sold on the UK market.

2.2.3 Segmentation according to certification

The first MSC certification for plaice took place in 2009 with the company Ekofish Group. The fishing gear used is a demersal twin-rigged otter trawl. The mesh sizes of the nets vary from 120 – 140 mm, this allows a low rate of by-catch. The fishing area is Central North Sea (ICES: area IVb).

Source: MSC factsheets on certified fisheries

MSC accounts for about two thirds of Dutch catches of plaice (65% of 2013 catches).

The demand for MSC products is increasing, especially in the Netherlands, Germany and the United Kingdom, which are important markets for plaice. Several large-scale retailers committed to supply with MSC products, such as Ahold, EDEKA, Sainsbury’s… However, this certification is not required by retailers in Italy, which is the first market for Dutch plaice. Thus, depending on the market, all fish caught in a certified fishery are not sold with MSC label to the consumers.

Plaice under MSC allows a price premium for fishermen (about 0,10 EUR/kg). Based on interviews, this covers the costs for the management and controls for MSC certification. On the Dutch and German markets MSC tends to be a tool necessary to access the market and not a way of differentiation.

The use of MSC logo at retail stage leads to the payment of a royalty fee to MSC organisation by the retailer, the amount of this royalty fee ranges between 0,3 and 0,5% of the sales.

2.2.4 Possible use of additives

Processors are authorised to use additives to the filleted plaice with a maximum of 10% of the total weight. The additives used are notably E301 (sodium ascorbate) and E331 (sodium citrate). The use of additives is done on request of the client and allows to reduce the price and extend the expiry date. This technology is implemented on the low-range market on which competition is intense.

According to interviews, this is in particular requested by Italian clients but not used on the German market. No data is available on the share of the production concerned by the use of additives.
2.3 The Dutch market

2.3.1 Supply balance

Apparent consumption of plaice in the Netherlands is 8.760 tonnes whole fish equivalent (3.767 tonnes fillet equivalent) in 2014.

This national consumption may be overestimated. According to expert estimate, the consumption of plaice in the Netherlands is around 2.500 tonnes whole equivalent. This overestimate may be due to double counting between imports and catches due to UK and German vessels landing plaice directly in the Netherlands. Furthermore, some UK vessels directly sell to processors and do not sell through auction. This increases the difficulties to precisely track the flows of plaice. Based on EUMOFA, in 2014, imports of fresh whole plaice to the Netherlands reached 11.843 tonnes from the UK and 3.834 tonnes from Germany.

Figure 11 - Balance supply of plaice in the Netherlands (2014)

Plaice landed in the Netherlands (by Dutch or UK vessels) is sold through auctions or directly to processors. The direct sales from UK vessels to processors significantly increased in the last years. Urk is the first auction in the Netherlands with 38% of the volume of plaice sold in 2014, Ijmuiden/Velsen is the second site (25%) and Den Helmer the third (13%) (see figures next page).

The Dutch Fish Marketing Board (www.dutchfish.nl) lists 51 companies involved in export of plaice, many are also involved in plaice processing and are located in Urk.
Figure 12 - Breakdown of the volume of plaice sold in the different auctions in the Netherlands (2014)

Source: EUMOFA

CN8 code for fresh plaice fillet is only available since 2012. For this reason it is not possible to calculate precisely the supply balance (including fresh fillet) on a long period.

If we do not take into account fresh fillet, national apparent consumption largely increased between 2003 and 2014 (7.247 tonnes in 2003 and 19.095 tonnes in 2014). This evolution may be related to a statistical bias with UK landings in the Netherlands (see above).

2.3.2 Prices at first sale

As mentioned at section 2.2.1, the offer is segmented by size. Between 2011 and 2014, the price of category 1 plaice (largest size) increased by 21,5% to reach 2,41 EUR/kg. This category accounts for a limited share of the catches (7% in 2014). The price of the category 2 fish remained stable (-0,4%) at 1,57 EUR/kg.

The prices of the two categories which gather the largest share of the catches decreased between 2011 and 2014, notably the category 4 (smallest size) with -14,7% to reach 1.0 EUR/kg (-11,9% for category 3) (source: based on PEFA). These prices were low for fishermen who could target other species more attractive in terms of price, such as sole.

The price of plaice strongly increased since the end of 2014 and notably during summer and autumn 2015: the price of category 4 reached 1,85 EUR /kg at Ijmuiden auction in November 2015 and 1,69 EUR/kg in February 2016. This increase had not been anticipated by the different stakeholders. This allows fishermen to increase the profitability of their companies. However, some processors face difficulties if they sell their plaice to retailers with a long-term contract (this kind of contract may last a few months or one year). In this case, they committed to supply retailers with a fixed price with the hypothesis of a first sale price between 1,00 and 1,50 EUR/kg (hypothesis of prices at the beginning of the year, based on interviews). The situation can evolve at the end of the contract, when the price is renegotiated.

Figure 13 – Yearly average price of plaice by category between 2011 and 2014 and weekly price of plaice for categories 3 and 4 between 2011 and 2016 at Ijmuiden auction (EUR/kg)

Source: PEFA (yearly average price) and EUMOFA (weekly price)
2.3.3 Imports

Dutch imports reached 19.693 tonnes and EUR 32.2 million in 2015. More than 90% of volume and value are fresh whole plaice (respectively 98.6% and 93.1%).

Imports in the Netherlands are linked to the availability of plaice in the EU (EU accounts for 85.6% of plaice catches in the world in 2014), and thus to the evolutions of TACs and quotas. Imports were on a decreasing trend between 2003 and 2009 (-27.4% in volume) and increased between 2009 and 2014 (+20.9% in volume, excluding fresh fillet). However, imports registered a large decrease in 2015: -22.5% in volume and -5.4% in value.

**Figure 14 - Volume of plaice imported in the Netherlands between 2003 and 2015 (fresh fillet only since 2012)**

**Source:** EUMOFA

**Figure 15 - Value of plaice imported in the Netherlands between 2003 and 2015 (fresh fillet only since 2012)**

![Value of plaice imported in the Netherlands between 2003 and 2015](image2)

**Source:** EUMOFA
Price of plaice and plaice products imported in the Netherlands decreased between 2003 and 2015: 2.07 EUR/kg in 2003, 1.82 EUR/kg in 2006 and 1.56 EUR/kg in 2015.

**Figure 16 - Price of plaice imported in the Netherlands between 2003 and 2015**

![Graph showing the import price of plaice in the Netherlands from 2003 to 2015.](source)

The United Kingdom accounts for 56.8% of the volume imported in 2015, it reaches 92.5% with Germany and Belgium. As previously mentioned, some of the imports from the United Kingdom are fish landed in the Netherlands by UK fleet.

**Figure 17 - Imports of plaice in the Netherlands by origin (2015)**

![Bar chart showing the imports of plaice in the Netherlands by origin in 2015.](source)
2.3.4 Exports

Exports of plaice by the Netherlands reached 18.117 tonnes of products and EUR 106 million in 2015:

- Frozen fillets accounted for 56,7% of volume and 54,6% of value;
- Fresh fillets accounted for 23,6% of volume and 30,1% of value;
- Whole plaice (frozen and fresh) accounts for 19,7% of volume and 15,3% of value.

Exports were on a decreasing trend between 2003 and 2010 (-35,7% in volume and -31,8% in value) and increased between 2010 and 2014 (+9,8% in volume and +9,2% in value, excluding fresh fillet). In 2015, exports decreased by 17,8% in volume and 7,4% in value.

Figure 18 - Volume of plaice exported by the Netherlands between 2003 and 2015 (fresh fillets only since 2012)

![Volume of plaice exported by the Netherlands between 2003 and 2015](source)

Figure 19 - Value of plaice exported by the Netherlands between 2003 and 2015 (fresh fillet only since 2012)

![Value of plaice exported by the Netherlands between 2003 and 2015](source)
In 2015, the main market for Dutch exports was Italy with 40.2% of the sales in value. The second was Germany with 15.2%. Belgium and the United Kingdom accounted for 10% each.

**Figure 20 - Exports of plaice from the Netherlands by destination (2015)**

![Exports of plaice from the Netherlands by destination (2015)](image)

Source: EUMOFA

The following figure displays the price of plaice products exported from Netherlands in 2015. Price of fresh fillets is 24% higher than frozen fillet price.

**Figure 21 - Price of the plaice products exported from the Netherlands (EUR/kg, 2015)**

![Price of the plaice products exported from the Netherlands (EUR/kg, 2015)](image)

Source: EUMOFA
The price of plaice products exported from the Netherlands increased by 15.8% between 2003 and 2015. However, we can note a decrease of price between 2009 and 2011 (-17.1%) and an increase of the volume exported in 2011 (+24.1%).

Over the period 2003-2015, volume decreased by 29.4% (fresh fillets not taken into account).

Figure 22 - Volume and price of plaice products exported from the Netherlands between 2003 and 2015 (fresh fillets excluded)

The figures next page show the evolution of price and volume exported from the Netherlands by plaice product between 2003 and 2015 (2012 to 2015 for fresh fillet).

- Frozen fillets
  This is the main plaice product exported. While exports decreased by 49.4% between 2003 and 2015 (even if we can note an increasing trend since 2010), the price of frozen fillets increased by 12.7% over the period.

- Fresh fillets
  Data are available only for the 2012-2015 period.
  Price increased by 33.7% in three years, while volume decreased by 13.3%: -27.5% in 2013, +30.3% in 2014 and -8.3% in 2015.

- Fresh whole plaice
  Export of fresh whole plaice decreased 48.6% in volume between 2003 and 2015. It follows the trends of landings: -59.8% from 2003 until 2009, increasing trend afterwards (+71.1% between 2009 and 2014) and decrease in 2015 (-25.2%).
  Export price increased each year, except in 2009 and 2010. Between 2003 and 2014, it went from 2.61 EUR/kg to 5.18 EUR/kg (+98.4%).

- Frozen whole plaice
  The volumes exported remain limited but are on an increasing trend (+175.2% between 2003 and 2015) with a price decrease: -8.0%. Unlike other plaice products, the exports of frozen whole plaice increased over the last 10 years.
  - 2003-2009: +30.8%
  - 2009-2014: +30.9%

2.4 Overview of the main EU markets of destination of Dutch plaice

2.4.1 Italy

Italy is the first export market for the Netherlands. 100% of Italian supply is based on imports as there are no catches of plaice in Italy. The Netherlands accounts for 57% of the volume of plaice products imported in Italy in 2015.

**Table 9 - Balance supply of plaice in Italy in 2014**

Fillet = 43% of whole equivalent

Source: EUMOFA, FAO

Between 2003 and 2015, the exports from the Netherlands to Italy decreased by 35.2% in volume and 31.7% in value.

Imports in Italy are mainly frozen fillets (75% of volume in 2015) and 78% of this volume come from the Netherlands.

We observe the same trend for export of frozen fillets from the Netherlands to Italy as for total exports of frozen fillets from the Netherlands:

- Large decrease of volume: -33.5%;
- Low increase of price: +3.9%.

**Figure 24 - Volume and price of frozen fillets of plaice exported from the Netherlands to Italy between 2003 and 2015**

Source: EUMOFA
2.4.2 Germany

Germany is the second market for Dutch plaice. National supply is 75% based on imports and the Netherlands accounted for 43% of German imports in 2015.

Germany is also active on the export market with 6.195 tonnes in 2014 (whole equivalent), which accounted for 33% of the supply, 45% of the imports and 134% of the catches.

The imports are mainly fillets (frozen and fresh) and the exports are mainly whole fresh plaice.

Fillet = 43% of whole equivalent

Source: FAO, EUMOFA

Plaice catches largely increased between 2007 and 2014 in Germany (+59%), and total catches reached 4.634 tonnes in 2014.

Exports from the Netherlands strongly decreased between 2003 and 2015:

- Frozen fillets, which account for 57.9% of total exports in 2015, decreased by -51,7% in volume between 2003 and 2015. We can observe three periods:
  - Decreasing trend between 2003 and 2010: -51,3%;
  - Increasing trend between 2010 and 2013: +73,0%;
  - Large decrease in 2014 and 2015: -42,7%.
- Frozen whole: it accounts for 29,7% of volume exported and decreased by 51,7% between 2003 and 2015.
- Fresh fillets account for 6,3% of the volume exported in 2015.
- Fresh whole: it only accounts for 6,0% of volume exported in 2015, it decreased by 62,5% over the period.

### Figure 25 - Volume of plaice products exported from the Netherlands to Germany

Source: EUMOFA
2.4.1 Belgium

Belgium is the third market for Dutch plaice. In 2014, national supply is 59% based on national catches and 41% based on imports. Belgium has a strong export orientation, 87% of the Belgium supply is exported (12.928 tonnes whole equivalent in 2015). In 2015, 39,1% of the volume imported in Belgium (whole equivalent) come from the Netherlands.

Source: FAO, EUMOFA

The exports from Netherlands to Belgium grew by 140% between 2003 and 2015 (excluding fresh fillet). This is due to a large increase of fresh whole fish, which accounted for 276 tonnes in 2003 and 1.569 tonnes in 2015 (+469%).

3 PRICES DOWNSTREAM THE SUPPLY CHAIN

This chapter proposes to analyse prices and trends at the various stages of the plaice supply chain in the Netherlands, with the objective to set the framework for price transmission analysis (chapter 4).

3.1 Price information sources

While chapter 4 relies on data gathered through direct interviews with stakeholders, chapter 3 lists the consistent sources regularly accessible and the content of the information provided by each of them.

Table 12 - Sources on prices

4 PRICE STRUCTURE IN THE SUPPLY CHAIN

We propose the analysis of the price transmission for two supply chains:

- Fresh MSC fillet sold on the Dutch market by a large-scale retailer;
- Frozen fillet exported to Italy.

4.1 Fresh fillet on the Dutch market

The following table provides the range of the various costs for fresh plaice fillet marketed on the Dutch market.

Table 14 - Costs and margins for the fresh plaice fillet in the large-scale retail in Netherlands (November 2015)

<table>
<thead>

The following figure illustrates the price transmission in the supply chain for fresh plaice fillet on the Dutch market. This figure has been drawn up from interviews with fish processors and a purchase manager of a large scale retailer in November 2015.

The price reference for the fish at first sale stage is from Urk auction on the 9th November 2015:

- gutted fish;
- size category 3;
- MSC certified.

**Figure 28 - Price transmission for fresh fillet MSC on the Dutch market (in EUR/kg)**
### 4.2 Frozen fillet exported to Italy

The following table provides the range of the different costs for frozen fillet of plaice marketed on the Italian market.

**Table 15 - Costs and margins for the plaice fillet frozen exported to Italy (November 2015)**

<table>
<thead>
